

Business Analytics Dashboard (Power BI)

Project Overview

The **Business Analytics Dashboard** is an interactive Power BI solution developed to analyze sales performance, customer behavior, product returns, and business growth. The dashboard converts raw business data into meaningful insights using KPIs, interactive visualizations, and dynamic filters, helping management monitor performance and make data-driven decisions.

Objectives

- Monitor overall business performance.
 - Analyze sales trends across states and years.
 - Track customer purchasing behavior.
 - Understand gender-wise sales contribution.
 - Identify return order reasons.
 - Improve business decision-making using interactive reports.
-

Dashboard Features

Key Performance Indicators (KPIs)

-  Total Customers: **800**
-  Total Sales: **21M**
-  Total Orders: **4K**
-  Total Profit: **4.38M**
-  Maximum Sales: **10K**
-  Minimum Sales: **302**
-  Return Rate: **8%**

Interactive Filters (Slicers)

Users can filter the dashboard by:

- Product Category
 - Accessories
 - Electronics
 - Fashion
 - Furniture
-

Visualizations Included

1. Total Sales by State (Column Chart)

Compares total sales across different states to identify the highest-performing regions.

Insight: Maharashtra recorded the highest sales, while Karnataka generated the lowest revenue among the displayed states.

2. Total Sales by Gender (Donut Chart)

Shows the sales contribution of male and female customers.

Insight: Sales are almost evenly distributed, with male customers contributing slightly more than female customers.

3. Return Orders by Reason (Pie Chart)

Displays the distribution of returned orders based on different return reasons.

Insight: Late Delivery and Quality Issues are the most common reasons for product returns.

4. Top Customers by Sales (Horizontal Bar Chart)

Ranks customers based on total purchase value.

Insight: A small group of customers contributes significantly to overall sales revenue.

5. Total Sales by Year (Area Chart)

Shows yearly sales performance and business growth.

Insight: Sales peaked in 2022, declined in 2023, recovered in 2024, and experienced a slight decrease in 2025.

Tools & Technologies Used

- Power BI Desktop
- Power Query
- DAX (Data Analysis Expressions)
- Data Modeling
- Microsoft Excel
- Interactive Slicers
- KPI Cards

Dataset Information

The dataset contains business transaction data including:

- Customer ID
- Customer Name
- Gender
- Product Category
- Product Name
- Order ID
- Sales
- Profit
- Quantity
- State
- Return Orders
- Return Reason
- Order Date

Key Insights

- Maharashtra generated the highest total sales.
 - Male customers contributed slightly more sales than female customers.
 - Late Delivery and Quality Issues were the leading return reasons.
 - Top customers generated a significant portion of total revenue.
 - Sales showed fluctuations across years, indicating changing business performance.
 - The overall return rate remained at **8%**, highlighting opportunities to improve customer satisfaction.
-

How to Use

1. Open the **Business_Analytics_Dashboard.pbix** file in Power BI Desktop.
 2. Refresh the data if required.
 3. Use the **Category slicer** to filter dashboard data.
 4. Analyze KPIs and visualizations.
 5. Generate business insights for better decision-making.
-

Future Enhancements

- Sales Forecasting using AI Visuals
 - Customer Lifetime Value Analysis
 - Regional Profitability Dashboard
 - Product Recommendation Analysis
 - Real-time Data Refresh
 - Drill-through Reports
 - Mobile-Optimized Dashboard
